J. T. Walker III
Commodore Perez came aboard to witness the changing of CURTIS WILBUR’s
command from Commander A. J. Abramson to Command J. T. Lauer. On March 29th,
2004 in a ceremony rolling in the waves of the Sea of Japan the crew of CURTIS
WILBUR welcomed a new Captain and said farewell to another.

The next stop for CURTIS WILBUR was a port visit in the other United States
Naval base in Japan at Sasebo. Over the span of a week CURTIS WILBUR conducted
some much needed repairs to its engineering plant as well as giving the crew some much
needed time ashore following its time off Korea. Soon after, CURTIS WILBUR returned
home to Yokosuka in late April to begin months of preparations to become the Navy’s
first active Ballistic Missile Defense (BMD) ship.

For the next three months CURTIS WILBUR underwent extensive alterations to
its communications and combat systems suites in preparation for the first BMD patrol.
With the assistance of experts from Port Hueneme Naval Surface Warfare Division, Ship
Repair Facility Yokosuka, and Center for Surface Combat Systems Yokosuka, CURTIS
WILBUR was able to transform both its equipment and training to prepare for this
vanguard deployment. CURTIS WILBUR sailors used their expertise to not only learn
their new equipment and mission but to also expand upon it and establish doctrine and
training for other BMD ships to follow.

In mid-July after months of strenuous installations and training CURTIS
WILBUR put to sea to test its BMD equipment and theory and also to conduct its
Destroyer Squadron 15 Mid-Cycle Assessment. With both evolutions passed and
validated CURTIS WILBUR sailed south toward a groundbreaking and unprecedented
port visit to Da Nang, Vietnam.

As only the second United States Navy ship to visit Vietnam in thirty years,
CURTIS WILBUR sailors were more than aware as to the uniqueness of the port visit
and the opportunities it offered. CURTIS WILBUR sailors made most out of their time
conducting numerous site sightseeing and shopping tours. Several receptions and
community projects helped to reawaken and strengthen ties that had not existed in Da
Nang since the American departure in 1973. Through five miraculous days CURTIS
WILBUR sailors had the experience of a lifetime opening new doorways for their
country and themselves.

Following Da Nang, CURTIS WILBUR returned to Yokosuka for another two
months of BMD preparations. Using much the same regimen as the early spring,
CURTIS WILBUR continued with the extensive installations and training that was
needed. The first ever BMD patrol began the last week of September as CURTIS
WILBUR sailed north from Yokosuka bound for the Sea of Japan.

October 1st, 2004 found CURTIS WILBUR on station and radiating its modified
SPY-1D radar over North Korea in defense of the United States. Through two weeks of
this proof of concept patrol CURTIS WILBUR avoided the swipes of both the BMD
critics and two typhoons to provide the best possible coverage for this new mission.
